

Zevenet L4 Session replication

Session persistence and high availability in Zevenet

High Availability
Load Balancing
Web Scale
Security

made easy

Who I am?

Abdessamad El Abbassi

- ★ Computer Science Engineer at Zevenet SL.
- ★ Hardware and low level development.
- ★ Support team.
- ★ Open Source and Gnu/Linux passionate.

Why session persistence and session replication?

- Avoid continuous validation to client requests.
- Client session data in one backend.
- Ease load balance algorithms.

L4xNAT Session persistence

Use of Iptables recent module

```
-A PREROUTING -d 192.168.56.100/32 -p tcp -m recent --rcheck --seconds 120 --name _MyL4Farm_0x200_sessions --rsource -m multiport --dports 60  
-j MARK --set-xmark 0x200/0xffffffff
```

```
-A PREROUTING -d 192.168.56.100/32 -p tcp -m recent --rcheck --seconds 120 --name _MyL4Farm_0x201_sessions --rsource -m multiport --dports 60  
-j MARK --set-xmark 0x201/0xffffffff
```

```
-A PREROUTING -p tcp -m mark --mark 0x200 -m recent --set --name _MyL4Farm_0x200_sessions --mask 255.255.255.255 --rsource -m comment  
--comment "FARM_MyL4Farm_0_" -j DNAT --to-destination 192.168.56.1:80
```

```
-A PREROUTING -p tcp -m mark --mark 0x201 -m recent --set --name _MyL4Farm_0x201_sessions --mask 255.255.255.255 --rsource -m comment  
--comment "FARM_MyL4Farm_1_" -j DNAT --to-destination 192.168.56.250:80
```

```
~# tail /proc/net/xt_recent/_MyL4Farm_0x20*  
==> /proc/net/xt_recent/_MyL4Farm_0x200_sessions <==  
  
==> /proc/net/xt_recent/_MyL4Farm_0x201_sessions <==  
src=192.168.56.1 ttl: 64 last_seen: 4298231337 oldest_pkt: 3 4298229032, 4298230236, 4298231337
```

Adding, removing, updating session data

linux/net/netfilter/xt_recent.c modification

- Default recent commands

- echo +addr >/proc/net/xt_recent/_recent_table_
to add addr to the _recent_table_ list
- echo -addr >/proc/net/xt_recent/_recent_table_
to remove addr from the _recent_table_ list
- echo / >/proc/net/xt_recent/DE_recent_tableFAULT
to flush the _recent_table_ list (remove all entries).

- New command to insert full address recent timestamp

- echo *addr ; ttl ; timestamp1; timestamp2; timestamp3;...; > /proc/net/xt_recent/_recent_table_
to insert the source address with full timestamp data int the _recent_table_ list

Ssyncd: Zevenet Session Synchronization service.

User space daemon in master - slave mode syncing L7 and L4 session data - <https://github.com/zevenet/ssyncd>

Usage

```
ssyncd -M [-p 7777]  
ssyncd -B [-a 127.0.0.1 -p 7777]
```

Commands: Either long or short options are allowed.

-M --master	start master node
-B --backup	start backup node

> Control interface(ssyncdctl):

```
# ssyncdctl start recent/[http farm_name]  
  
# ssyncdctl show recent/http  
  
# ssyncdctl write http
```

Ssyncd, what next?

Performance

Kernel updates using
kernel sockets
(Netlink)

Nftables

Use maps per
client:backend with
timeout
